CHLORHEXIDINE SPRAY

APPLICATION

Suitable for cleaning minor skin damage or rashes, in fur and on paws.

- 4% chlorhexidine enhanced with Aloe Vera
- Therapeutic wound spray
- Antiseptic cleansing benefits

Eclipse Biofarmab BioChlorHex Spray 4% is an antiseptic solution featuring chlorhexidine, specially formulated for the treatment of irritated and damaged skin in animals, including horses, dogs, and cats. This disinfectant spray is both cleansing and protective, offering a sting-free application.

Ideal for wound cleaning or situations demanding an antiseptic approach. Safe for regular use, but when in doubt regarding the treatment of any skin or wound condition, always consult a veterinarian.

For application, spray the affected skin areas until moist (but not soaked), and allow it to air dry naturally. No rinsing or wiping required.

Chlorhexidine, with its wide-ranging antibacterial effectiveness, supports the preservation of the skin's protective barrier. It proves effective in cleansing minor skin injuries, bite wounds, and various skin conditions, making it suitable for use on fur and paws.

Moreover, the spray incorporates Aloe Vera, rich in lignin, which efficiently penetrates the skin, further promoting the healing process. We exclusively use ACTIVAlloe, the world's most rigorously tested Aloe Vera product, guaranteeing a minimum of 10% polysaccharides.

INSTRUCTIONS FOR USE

Shake the bottle well before use. Clean the affected area, then generously spray on and around the wound. Do not rinse or wipe off. Repeat 1-2 times daily until the wound heals, or as directed by a veterinarian.

For external use only.

If you have any doubts about wound treatment, consult a veterinarian.

COMPOSITION

Chlorhexidine 4%, Aloe Vera, Glycerol.

SHELF LIFE

36 months.
