COOLING LINIMENT

APPLICATION

To be used as a rapid-cooling liniment for horse's muscles, joints, and tendons, with a gel formulation that ensures easy and smooth application.

- Delivers a refreshing cooling sensation
- Effortless and smooth application
- Ideal for massaging muscles, tendons, and joints

Eclipse Biofarmab Ice Gel is a premium cooling liniment suitable for the horse's muscles, joints, and tendons, offering a refreshing cooling effect thanks to key ingredients like menthol and eucalyptus oil.

This liniment works by reducing blood flow, facilitating quicker healing of minor skin and superficial tissue bleedings that can occur following intense exertion.

Ideal for massaging tired, sore muscles, joints, and legs after rigorous training, Ice Gel is straightforward to apply. Distribute a generous amount over the targeted area and allow it to take effect.

For optimal results, apply the gel extensively along the entire leg and onto fatigued muscles post strenuous activity or work on hard surfaces. Apply gently to areas with bumps or swelling.

It is crucial not to cover the treated areas with Ice Gel to prevent blistering. Avoid use on open wounds or damaged skin to prevent irritation. Ensure the product is kept out of children's reach and avoid contact with eyes and sensitive skin.

Please be aware that due to the presence of menthol, Ice Gel requires a 96-hour competition waiting period in Sweden.

INSTRUCTIONS FOR USE

Apply a generous amount to the targeted area.
Important: Must not be covered.

For external use only.

COMPOSITION

Isopropyl Alcohol, Menthol, Eucalyptus Oil, Water, Gel Foundation.

SHELF LIFE

36 months.
