

SWEDE CLAY SWEDE CLAY

LINIMENT

Cooling clay for horses

COOLING CLAY

APPLICATION

To be used for post-exertion and daily leg care in horses, effectively dissipating heat for optimal cooling.

- Effectively cools the horse's legs
- Draws heat away for rapid cooling
- Natural composition, eliminating frostbite risk

Eclipse Biofarmab Swede Clay is a cooling clay with sustained cooling effects, ideal for use after intense exertion and for routine leg care.

By acting as a thermal conduit, Swede Clay transfers heat from the horse's legs to the external environment, enabling deep, effective cooling.

Apply a generous layer of the clay over tendons and joints, leaving it to dry. The cooling effect persists as long as the clay remains moist, and once dry, it can be effortlessly removed by brushing or rinsing.

Traditionally, horse legs were cooled with water and mud post-exercise. Swede Clay's unique clay formulation not only mimics this ancient practice by absorbing heat from within for profound cooling but also supports the rapid healing of minor strains and superficial injuries by slowing blood flow.

Swede Clay is also suitable for cooling areas with small wounds, such as the mane comb or the tail root in horses with eczema.

Note: Mix well before use. Should the clay become too dry, rehydrate it with water.

INSTRUCTIONS FOR USE

Quick cooling: Apply a thick layer directly to the targeted area. Leave until completely dry, then remove by brushing off or rinsing. It may also naturally fall off.

Slow cooling: For a gradual cooling effect followed by gentle warmth, cover the clay with paper and bandage. This method combines cooling with the benefits of a stable bandage.

Stir before use. For external use only.

COMPOSITION

Magnesium Sulphate, Glacial Acetic Acid, Alum, Linseed Oil, Kaolin, Sodium Benzoate, Spring Water.

SHELF LIFE

24 months.

SIZES AVAILABLE

1050	2 kg
1055	4 kg
1051	10 kg
