

# IMPREGNERINGSSPRAY

## IMPREGNATION SPRAY

### MATERIAL CARE

Impregnation spray  
for horse blankets, jackets  
and other textiles

## TEXTILE IMPREGNATION

### APPLICATION

To be used for the impregnation of horse blankets, jackets, and other textiles, offering water-repellent properties.

- Ideal for horse blankets and textiles
- Water-repellent properties
- Convenient spray bottle design for easy application

Eclipse Biofarmab Impregnation Spray is an ideal solution for revitalising and reinforcing water-repellent properties on horse blankets, jackets, and other textiles.

It is designed to effortlessly restore the original water-repellent capabilities of fabrics, thereby enhancing their durability and functionality.

To use, simply apply the impregnation spray uniformly over a clean, dry surface and allow it to settle for approximately 30 minutes.

This formulation leaves no sticky residues or staining.

The convenient spray bottle design simplifies the application process, ensuring even coverage across the fabric. For optimal results and safety, use the spray outdoors or in a well-ventilated indoor area.

By utilising this impregnation spray, you can significantly extend the lifespan of your horse blankets and outerwear, bolstering their protection against rain and moisture.

How many horse blankets can one spray bottle treat?

A single spray bottle can treat up to 5 square metres with standard application. However, the actual coverage may vary based on the thickness of the applied layer and your desired level of water resistance.

### INSTRUCTIONS FOR USE

Apply the spray to a clean, dry surface and allow approximately 30 minutes for it to dry before use. Should be used outdoors or in a well-ventilated area. Non-sticky and leaves no stains.
